Acorn steals Atari's thunder

Acorn launched the machine at the BBC B+G low cost PCW show in Olympia.

The new machine offering BASIC with a 6MHz 68000, available to BBC+G will retail at £1495. Known simply as the BBC-2000, it is aimed at the serious home user and the small business market. With an eye to business applications the machine has greater data processing power for bigger spreadsheets, larger databases, 20% more and wider BASIC available by BASIC.

Acorn put the BBC-2000 on public view for the first time at PCW. In the lead-up to the show, Acorn's Sales and Marketing manager Rob Hartung announced that the £1495 machine will be the natural successor to the BBC model B.

With Acorn now leading over one million sales to the machine that has now sold over 200,000 units, it remains to be seen if Rob Hartung's prediction comes true.

The last book on the Acorn ST, called the Acorn ST Companion by Jeremy West, was also launched at PCW.

The Cambridge Amiga made a largely unheralded British debut on Friday night, demonstrating the British company's software packages. The Amiga, introduced in America in July has still not been given an official launch date in this country.

Being demonstrated for the first time in Olympia, Europe were Ben Cards, credit card reader modules with up to 256k memory.

The manufacturer, HoldenSoft have put £1495 on the price for Ben Cards yet, although the price in Japan is around £2. So far the Ben Cards are compatible only with BBC, but awaiting demand H. Holdensoft, said BBC that they could be adapted for Commodore, Amstrad and Sinclair machines within a year.

Management, Biosystems announced their first drive controller for the BBC as well as 30 new software titles.

Old names - New homes

The Bug Byte label is being revived following the acquisition of the title by Argus Print Software.

Argus' Tim Harris said the Bug Byte would be returning on a budget software label with games coming in Q3 '89.

It is not a coincidence marketing executive, Beaumont, "We won't be putting the old software from the back catalogue. If it's on the Bug Byte it will have certain quality will have to be good. We cannot carry on the Bug Byte reputation."

Bug Byte were one of the founders of software companies in the days when it was all a computer industry and the name is resurrected with business.

Also added this Bug Byte, a label with a reputation for article games and adventures, such as Twin Kingdom. Valley was back not only in spurs, but with a considerable amount of enthusiasm in it.

The third game available is about six weeks away is called Hay Day, and incorporates speech synthesis. That "voice has started" down a mouse-clicked track opens and has to recover them.

*Year 40. The Computer specialist magazine published by Spectrum, has been bought by Argus Specialist Press.

The October issue was the last to be produced by Spectrum and from November the more popular features of Year 40 will be published in Argus' new Computer title, Year Computer.

MIRRORSOFT

SEPTEMBER SIZZLERS

BOULDER DASH

One of the great classic games of all time is now available to even more of you - Amstrad and Atari owners everywhere can now experience the non-stop, the ultimate underground journey.

Search through the 16 levels, each with 5 levels of difficulty and collect as many jewels as quickly as possible. Don't forget to block the on-rushers, transform the butterflies, or jump over the fireballs - or you'll never get out alive!

Available September 5th

Amstrad CPC 6128 £19.95 and Amstrad CPC 464 £14.95.
Atari 400/600XL £19.95 and Amstrad 464 £14.95.

ASHKEROMI!

Ashkerom is a brand new action game from the creators of Jackalope, with a new futuristic look and lots of fun features. It's a fast-paced, action packed game with the most advanced computer graphics ever seen on a home computer system.

This is today's most advanced computer game, with over 100 levels of action and competition with the interesting and rewarding - Crash Mode.

This is a unique, original game - by Julianne Arkinson - a world achievement! - Mike George

Available now for
Amstrad CPC6128 £29.95
Spectrum 48K £24.95

With full colour graphics!

Find the Wizard in yourself

If you like to
swallow the
M.U.B. when there
are others and have
fun for you in this
country competition,
it's The Great
M.U.B. Spectacular
for the summer.

For many years, the search for a single, simple explanation of the origin of life has been a quest that has led to dead ends and dead ends. Now, however, a new theory has emerged that may finally provide a solution to this age-old problem.

The new legislation will be considered early in May, and it is expected that the Senate Finance Committee will take up the bill in June. The House will then consider the bill in its Committee on Small Business.

poem. I have much enjoyed the Anthology, both as a boy and now. I like it, and it has been a pleasure to me to have it.

The name of my first novel is ...

Description (in no more than 20 words) of any Award received:

I am _____ years (write your computer here).

Switched on for lights-out

The more sophisticated designs have a compact-disk generator in the cabinet to control the programme, power and brightness; the programme can be for the low-voltage Power Equipment range. The 20 VA model power bank could turn the engineers' new micro vision.

This one gives you a seven-joule power for 10 minutes — enough time to transfer working copy to disk. Working from battery, continuously charged from mains supply, it is well suited to mobile use when the input voltage fails.

However, it's not to you to assess the DPA's claims. WAIT to cover the cost of the unit.

Style Busters

Winners of our silly game of the week competition this week (and joint winners) are Holdbyne House Company of St Albans.

At the Annual Caravan they had a float based on the pure Ghostbusters and had a number of their staff and friends dressed for the part. These were, sans, the marshmallows sans, hats and a team of "busters" ready to do battle with any other psychic phenomena.

The team were awarded £600 for their efforts and the population of the town were notably scared. Dr John Jon, managing director, commented:

"Although we have a reputation for helping people to be

less impressed by computers, our regular customers get a great kick from being award by the Holdbyne team today."

The occupants are not at all disconcerted about the future of home computers and have shown their faith in computers in new shape at the St Albans Market Place. They are meeting an increasing demand for more powerful machines which offer a higher standard of quality and sophistication for programs and games.

To your local shop or computer club have taken part in any caravanning or similar event please let us know and we will endeavour to include details in our pages.

RELEASES

Bits and Pieces

The horrors of Spanish package holidays are brought to life in *Terrormolinos*, a spoof game by the man author who brought you *Hempfest*. Melburne Holmes' spoof game confronts the player with the perils of the beach, sea, holiday and the grim encounter of a culinary kind in the restaurants. In *Terrormolinos* it is claimed that "every holiday disaster can come true". The game is available for Spectrum, BBC/Amstrad, C64 and Amiga at £7.95.

A program for those in two minds of *Hempfest* from Qualitative at which the mind bogglingly assumes cocaine at size up which set out to ruin life on the job. Alfonso the cook tries to get back together with his other half but the "dopefingerer" is still here so putting Alfonso made redundant from his job in lab-coat by playing darts rocket. Costing £7.95 *Hempfest* is available initially on the C64 with a Spectrum version to follow. Money on the Run, the sequel to *Cannabis Crookin' Wanted!* Money Man is due for release on the C64, Amstrad, BBC/BM and C16 (£3.95 and £17.95 for the disk version).

For the less serious minded, New Generation's Fun 'N' Games range sounds like good old-school stuff. The Cooked Kid is searching for a secret recipe but not only has he 600 attempts to waste through but the previously gained are not yet put him into custody.

World's worst

Globet Software are making a valiant attempt to carry off the "worst" title in computer games ever made, except by removing the exclusive rights to *Attack of the Madhouse People* for a fee probably an excess of two thousand pounds. And it's a very tall claim, with a great deal more carnage lurking on their own Global will be bringing out a series promising all the horrors, ghouls and hellish mayhem of every of the planet's worst regions.

You can be shrilled to all corners as the crazed Madhouse People attack, the seven local inhabitants of the planet that have

TERRORMOLINOS

Chill Hemp is not quite as crazy but there's still the chance of a sticky ending as when turns out to be a whisky參與者 game. Available from the 12th September Plus 'N' Games for the Spectrum and priced at £4.95.

Coming later in September are two new releases for the Spectrum from CCP: *Art Blaster* promises to be "just

a graphics program but a hell user's guide" with 16 pages and 8 random sprays to add the blinding. *David Blockbuster* amazes you.

Word Manager should satisfy those with a more literary or practical bent — both DCC programs are on cassette and disk priced at £12.95 and £19.95 respectively.

Spectrum and Amstrad versions will be available on September 12th.

South Beach is a real life graphics adventure game set on Lancast's South Beach complex and the 200 locations include Festival Hall, the National Free Theatre and the British Library. In South Beach, you must now travel to find your son.

This program was designed for the 16-bit version but a 48k version of the British version is also planned. The Amstrad and Spectrum versions are due out September 12th. £17.95 and £24.95 follow in October. The Amstrad version is November. £19.95.

RELEASES

Gold in them thar hills...

US Gold have announced the Spectrum version of *Bear's Gold*. *Bear's Gold* will be available on September 22nd (£12.99). Already available on the C64 and Amstrad, *Bear's Gold* is the sequel to *Miner Master* and has lots back down the pit extracting rock, change in Mining Vocations and Mining Options while avoiding such dangers as blizzards, avalanches and the mobile racism test.

Only slightly less adventurous is US Gold's new much simpler game *Doughboy*, in which you try to get over the top and cross no man's land. Bloody messes are moving in the opposite direction and mortar shells are falling around your ears. Your aim is to collect the supplies which have been scattered across the battlefield and return to your own lines. *Doughboy* is available for the C64 and costs £9.99 or \$14.95 (USA).

US Gold have also released *Wizard and the Princess*, a sort of the far-fetched adventure in which you are paired up with the magical Merlin who has selected the princess ready to his horribly complicated castle beyond the Great Mountains. *Wizard and the Princess* is for the C64 price £9.99 or \$14.95 (USA).

WIZARD AND THE PRINCESS

Amstrad software

A new version of the Amstrad version of *Space Invaders* is now available. The original version was released in 1983 and has been updated with improved graphics and sound effects. The game features a space-themed setting where players must defend their planet from an invasion of alien spaceships. The player controls a laser gun and must shoot down the invaders as they approach. The game includes various levels of increasing difficulty and a high score table.

Another Amstrad game, *Death Star*, has also been released. This is a space-based action game where players must destroy the Death Star, a massive space station. The game features a variety of weapons and power-ups, and requires quick reflexes and strategic thinking to succeed.

SOFTWARE

Jeff Set Willy

The revolutionary theme about this game is the way it is presented. To my knowledge it is the first game to be produced on one of the credit card based Disc Cards which present the change the world of cartridge games.

The game is the follow up to Islamic Miner and follows the story of Willy the Miner after he has found fame and fortune. Our盗贼 (thief) hero has just gained these and thrown a party for his friends who are an army bunch, hunting hounds and slaves all over Willy's house in the aftermath of his win, Mineo.

Despite the fact that the mining has broken, there seems that Willy takes up the house before he gets to bed. You must guide him around his increasingly lethal house to help him in his death ridden quest.

Not all of the rooms contain party debris but strange creatures lurk in all of them. There are floors, walls, each room and the only way to pass along many of these floors is to jump. Sadly, if I had Willy's money I would rather go out and buy another house!

This game is well known on other machines and this is a good conversion but a little slower than the Spectrum original. The main advantage is the instant load which the card permits and an adapter is provided which slots into the cartridge port so that the card can be inserted in E.D.

MSX

Trivia UK

as has an acceptable version of David Purman's, the game which dominated Christmas sales last year. Unlike US Gott's Master Trivia, this is an accurate copy of the game with questions tailored for British players.

The questions are loaded in from a main program from two double sided cassette containing over 1400 questions.

Between ten and four players can join in the fun as they travel around a board answering general knowledge questions on a range of subjects. Each correct answer allows the player to move the number of squares which have been determined by the throw of an electronic die. The last feature is that answers are called out by the player rather than typed in as in, like me, your spelling is atrocious & I want to see you points!

After calling out an answer, a point of a key will reveal if you were correct and your reward will move around the board of pins you were offered. Don't play the game with a sensible fingered chest.

Some of the squares are larger than others to indicate that they are bonus squares. These should be your focus of attention because success on

one of these squares wins a point of pin and the first player to gain six points wins. That is assuming you can jump the last hurdle when your opponent has moved to select a final category of question that must be answered for success.

The game gives more to the computer for its answers than its presentation. The graphics are sound yet fairly rudimentary and reading the questions takes a long time. A little more thought should have gone into the program where the computer is searching for a question. Normally the question appears almost immediately but occasionally it can take a while before anything appears on the screen and I found myself wondering if the computer had crashed.

The level of the questions is what I would class as poor, amateur, not too hard but not too simple. This doesn't matter too much because there is an editor program which allows you to compile your own question sets if you wish.

My overall opinion is that this is the best Trivia game available for the C64 only because it has very little competition. It probably won't be long before it is superseded by a better programmed version, but at least it's relatively inexpensive.

William Wobbler

If you own a disc drive you could find yourself becoming very popular in the near future, and *William Wobbler* is the man to thank. It is all because Wizard has offered a £1000 prize for the disc player to create the score of William's world and you need access to a disc drive to enter.

Who is William? Well he's a cartoon character designed by programme Today Show host, and he's called Wobbler because he wobbles a lot (William not Tom). As William walks his hand just around seems unmercifully over his jolly body. Despite his ungainly appearance, William is a man with a mission because scattered around the various levels in the world are discs which could lead to the ultimate prize.

He can cross the world through any of ten hollow tree trunks which each lead down to a passenger and each passenger is guarded by a fiend. There is only one way that he can pass these guardians and that is to find the glowing orb which lies at the end of the only unguarded passage.

To find this passage he must

jump down each hollow tree trunk in turn, avoiding a rather vicious lady with a large club and a blue bird which swoops up and down across the screen. There is only one way to escape a guarded passage and that is to go direct underground where a long tunnel leads on a rope. A series of snakes and flying frogs lurk here too, with care, though don't give too much of a problem.

Once in possession of the orb, William can investigate all of the other passages, picking up objects which may be of use to him and applying any item that he finds. Most of the objects are useful but some are not, only that and cross will kill.

Now he around comes here and there open locked doors which lead to yet more passages full of taking rocks and flying debris. Behind one of these doors lies the score in a floppy disc which can be played with a television disc allowing William to have his camera collection of pictures and gondola against the loss of his single life.

This is a superb game with excellent graphics and lots of interesting problems to solve.

Mail Order Monsters

When it comes to game concepts, the Americans seem to have some pretty bizarre ideas. This game is possibly the oddest I've seen in ages. The idea is simple, you must cover your pet monsters in a fight to the death against another.

So where do you get your monsters? The answer is in your mail order catalogue! First you choose one of 12 basic MONSTERS — Mail Order Petshop Herbs. These guys have skills to increase. With the balance of your available cash you then buy a series of items. These include armours and weapons as well as monster attributes — speed, muscle, etc. The choices give you a huge range of possible creatures. Once all is set, you choose the type of battle and the arena. These types of battle are possible — simple hand-to-hand destruction, capturing flags and dealing with a board of swords.

Beyond the base game, you can progress to tournaments which offers many other challenges. Surprisingly enough, this isn't a mindless rip-the-enemy-pants, and buster and thought out an intense battle.

Not surprisingly, the graphics are to a high standard with some splendid multi-colour graphics. The view of the action is from above with a scrolling map of the terrain. When the combatants engage, the map zooms in to the immediate area of battle.

This is a novel game which is great fun to play and a fair challenge. The price is a touch too high even for a disc based game.

Cometone

London Adventure

It's games like this that give adventure players a healthy headache. It isn't understand why software companies even accept that kind of stuff on the first place. It raises both adventure and society issues, but when it looks something like this into my spectacles I really do wonder how they expect to get good reviews!

The game itself is awful, but what's worse? I have seen many games done on the grill and know it can produce far better than that.

At the start of the game you are taken to the Greenwich observatory. Then you have to try and work your way through London and all its sites, collecting and solving objects as you go, to end up in a telephone box. You then enter a series of numbers which are found within the game and you're cracked it.

There are plenty of locations, but the game still lacks depth and plausibility. Another thing to point out is that you have to complete the game in a certain number of turns. If you exceed the limit you won't be able to open the deposit box, thus not allowing you to travel around the various locations, getting familiar with them. I think the game is designed by at least C.I. and would disappoint a beginner.

I don't think it could recommend this game to anyone except tourists, who may find it a pleasant guide to London. This is just another dappled together game which should be avoided completely.

Jet Set Willy II

It's a little surprising Jetty, that Jet Set II passed with no bad comments. That's partly Softwiz Project's own fault of course, for trying to pass it as a new game when it's just the original ZXW with extra rooms. Automatically there are just a fair few new rooms, almost doubling the size of the game, but after all the time I've played ZXW I just couldn't work up the enthusiasm to go through all those familiar rooms in order to find the new ones.

It's also unfortunate of how Spectrum software has come in the year and a bit since ZXW was launched. Why took this the game represented the state of the art. The quality of the graphics had remarkably improved, and the sheer number of rooms in the game was unsurpassed. Now of course, ZXW II, with its art and improvements, looks quite dated, and it's never for the console, but with Martin Smith's original game I could easily be convinced just another old fashioned platform game — just another ZXW clone in fact.

It's still an enjoyable game, there's no doubt about that, and some of the new rooms are just as refreshingly addictive as they were in the original. But, if you've got the original and you've still in the market for a platform game, then you might be better off buying a game that is equally, rather than just yet, new.

CDS Macro Systems

Steve Davis Snooker

Further emphasising the excellent synonymous with the name on the game, this superb implementation is genuinely close to the real thing.

The challenge to improve your performance on the table becomes overwhelming as your ball and pool cues are reflected on the real snooker.

Moving neither ball or stick, to look, taking a small black cue or cues determines all the angles.

Speedy movement and fine control are both incorporated in the cursor bar, a fast speed and too. Added to this is the automatic return to the best ball position at the centre of the table, giving the shortest distance across the cloth to any position required.

A wide-ranging laser display at the bottom of the screen sets the power of the shot from scratch to places and follows my ball back. Strength is set to half-power before each player turns.

The fixed parameter controls the spin on the cue ball displayed at the bottom of the screen at a large white circle representing the cue ball, on which the spin arrow, another iconograph is positioned.

The third variable added back spin, top or bottom can be applied to the cue ball with devastating effect upon a lesser opponent.

A one player game allows for all those hours of pleasure that Steve has done and you have been promising yourself. Steve can be re-set and played again — a very helpful feature. D.H.

Price: £12.99 (dead)
£19.99 (boxed)

Android Two

I never got round to playing Android One, so I cannot make much of a comparison between the two games. However, of Android One or anything like Android Two that I'm interested that they seem considerably refining a concept.

The best feature of the game is the maze design which is pretty tortuous particularly when you are attempting to move at speed. As you move around at random, you meet which has the same land areas, Mountains, Rivers and Bridges. Thus, moving randomly will cost you a life if they manage to catch you but with the exception of the borders, all can be dealt with your mighty laser blaster.

The game features weapons, upgrade weapons so as you reach the edge of the screen, the next scrolls on. This is fine in theory, but the scrolling isn't really fast enough and this does become annoying when you are moving through the areas at the edge of the screen.

The game is split into three zones which all require the player to defend and invading units. You have to not get past the last zone, but that's easier said than done as the screen doesn't have that addressed which makes a game a waste. It has all the expected features, high score, auto level, detailed graphics and progression difficulty but it is not different enough to warrant a £19.99 release price.

Way of the Exploding Pit

I understand that Melbourne House now want to build themselves a reputation for strategy games that's as good as their reputation for adventure. *Exploding Pit* is typical of the standard of the arcade games they've got lined up, then they're not going to have any problems at all in that sense.

Exploding Pit pits you and your friend (or ally) against the computer or a second player, as you attempt to progress from humble citizen ("Ah ha, Grasshopper") to compensated Guru. Let me over Miss Piggy — ha-ha!

To achieve this you must pass mastery over the mechanics of the six joystick-controlled figures, which include a wide range of kicks, punches and defensive manoeuvres. My own personal favourite manoeuvre is the general summertime, followed by a kick to the face —结合 with a touch of class, just my style! Of course, your opponent has just as many moves that he can make so that figures are more than alive, there are no optional *Dance* (or figures that can be used by both players), and he can't start lunging at you elegant impudently himself.

The graphics are excellent, clear and smoothly animated, and there's a satisfying crunch created whenever you make contact. There are also some nice touches, such as the rather natty way in which your opponents strangle his jacket after stamping you into the ground.

Moving all the available movements will take some time, so there's a lot of enjoyable playing time to be had.

Ah ha, Grasshopper. C.A.

Convoy

Convoy is a two-player naval strategy game based on World War Two, covering the Atlantic Ocean and the North Sea. Each player commands a fleet of warships, an air force and a variety of merchant ships, with the objective of supplying their own country and blocking their opponent's.

Each turn you may signal to any of your 17 ships to alter their speed and course, remembering to allow for the wind, and the positions of all your ships are given — so your opponent need guess no longer! Only when all the squadrons have been completed can both players view the screen together, but then only the location of ships in port regions which takes several minutes to load up.

If visibility is good enough you can see through the water to land. There is a simple action sequence in which you can try to bomb your opponent's ship. If two ships sight each other the fight is automatic. Damaged ships can be repaired by returning them to a base port.

Comprehensive instructions and a map are included. There is no time limit, so the game can be recorded before the start of each turn.

There are as many ships under your control that it becomes tedious to keep track of them and after five hours in line with a strategy, I'm sure, most people will appreciate the amount of detail indicated, although *Convoy* can only be recommended if you can find a worthy opponent.

Project Future

In this space game set in the episode of an old ship, the SS Future, your task is to prevent the Red Doctor, send off the many droods, incinerate the robots to move between decks and find the codes to activate the ship's self defence system. Then get out quick! In other words, it's a shoot-'em-up-collect-the-object-space game.

Through the brief instructions you're given, I didn't find any. The sound effects of lasers and rays were particularly effective however — you're more noisier. Graphically the game, given its MAME, is very colourful and effective, with sensible depth achieved by careful use of shading, and flashing lights used to colour various generic life conditions. Power and so on. The characters are also well done, when tapped they are recast in another form and follow obediently to wherever you move. Movement is smooth, but a hint of flicker is present.

Keeping your fire button pressed dispenses with most of the aiming, and, as they respond very quickly, you have little time to appreciate the graphics. There's also no time to stop the ship, but using the weapon is fast. Even so, progress is slow due to the challenge level the game offers.

I would like to have seen a full score table, demo mode, some music, and a colour full map on screen rather than just the program title in standard characters, and the chance to tap about previously would have added to the game's appeal.

Tour de France

All of you lazy cyclists will love this game; you can enjoy the famous Tour de France cycling race and complete it in only a few hours while sitting at the comfort of your living room with a pot of coffee and a packet of biscuits.

There are 16 different systems of the track that you can cycle along. Each model is loaded off tape especially as it is needed. There is certainly plenty of variety to choose from. The program gives you the choice of players through the selection of just certain sections of the race. Playing the entire race takes a very long time and might be boring.

The colour of the background, border and your cycles are user-definable. The player selection screen contains a list of different nationalities and their respective flags, you then choose a nationality, enter your name and select the section of the game you wish to play. Now the first section of the race is loaded and away you go! The graphics are displayed at 160x200 and contain plenty of detail, the spectators even wave at you.

To enable you to continue to move the pedal, there's a key to note. Pedalling is achieved by holding in the fire button and pressing the pedal, at the direction that you wish to turn. The instructions are quite comprehensive and provide plenty of heavy reading. The game is originally designed and given good value for money.

BLUE TITMOUSE

Q-MAN

Q-MAN
by MOON &
Q-MAN

Q-Man

Programmed exclusively to the needs of the game is Q-Man, a version of Q-Bert, from Blue Titmouse Software.

Q-Man is a small red chap who at 12% size has got it in to wonder his way around the outside of a pyramid. Every time he steps upon a stone it changes colour. The aim of the game is to transform Q-Man onto every stone, thus discovering the complete pyramid.

This would not prove too difficult were it not for the roaming, mischievous players who hide behind the pyramid. Thus discover, constantly left, a smaller ball over the top of the pyramid. The ball then bounces from stone to stone on its way towards the bottom of the screen. Should you be unfortunate enough to be caught by the ball, then you can say goodbye to one of your Q-Man. You begin the game with three men so expect a new one for every seven completed. This is quite a pleasant diversion and can result in some quite lengthy games.

As the game progresses the following will be accompanied by a large snake which also jumps around the pyramid, usually in your general direction. On both sides of the pyramid there is a small door. By jumping over your man from the pyramid onto the door he is miraculously transported to the top of the building. Once he gets out of these sticky situations

Q-Man is a reasonably accurate version of the arcade game, but the action can become a little sluggish at times.

Make Music with Mastertronic

Commodore 64 owners possess one of the most sophisticated sound systems, right off the bat. Controlling it from BASIC, however, is a real pain, because the increasing number of utilities and scores and voice synthesis programs. You can pay over £20 for these programs and now as little as £8.95, when the aforementioned offer for £19.95 Answer - you're a fool!

What you do get however is easy to use. You simply tune in the musically natural way, placing your ears a few feet away, selecting the length of wire, greater or shorter distances, by pressing the cursor controlled pointer. Only a single note melody up to about 100 notes at a breath if possible, notes being altered from a C2 note note. There's a range of free instruments, trumpet, piano, guitar, recorder and drums. Only the recorder is missing the traditional sounds like a bass guitar, and the not sound nothing like the real thing.

These can be saved and loaded from tape and these sample tunes are included with the program. The instructions claim that the music can be passed on to a Commodore printer, but it didn't work on my Commodore 16/Pi/Pi2. The most irritating feature was the inability to save a tune, often after deleting the song from the end.

What it's very limited, it lost my love you will see for a couple of hours changing etc... later. There's worth a couple of pounds on its own.

RESCUE!

TRANSACT

TRANSACT
by RESCUE!
Software

Transact!

Transact is a book-keeping system for small business. It incorporates knowledge of Double Entry book-keeping, it does not let you do much book-keeping. However, if you are already managing a business and want to simplify your accounting procedures then this program may be of help. It can not be used to speed up the process of recording and preparing a company's financial affairs on a daily basis consistent with normal accounting practice.

The program is menu-driven, and comes complete with pre-set demonstrations. Accounts file, file opening, the program you are asked for a report date and then given the details of heading and entries. The file is created in a new one. There are 10 pages, five account headings, and 10 account headings to be defined by the user. Once headings have been defined the user offers the option of entering the heading, present transactions, repeat, previous, or end. Choice is by single keypress, extremely easy to use. Each option is menu-driven, with a clear screen layout. Transact saves entries into the main menu.

Other options include automatic VAT calculation, and of course profit and loss update, balance sheet by trial or cash, and personal ledger. Input of information is extremely simple, and the creation/recreation of a new record. The entered chosen the program can be presented against user entry and in testing the record to be the case.

The only true way to test a program like this is to everyday use. If you are looking for a simple to use, comprehensive book-keeping program then this may be what you are looking for.

BIO-DEFENCE

Bio-defence

The idea of defending a body from the invasion of a talking virus is extremely novel and should have resulted in a better game than this.

At the start, the virus invades itself as "Classical M" and informs you that it is a virus. The virus screen shows a human outline drawn over a sleeping girl along with the body's present temperature and a nice BBC display which blips away cheerfully while the body is healthy.

The patient controls a range of inputs moving around the grid. When it is over a highish numbered area it will light up. A quick press on the trigger then takes, you set the patient's bloodheat where you become a white capsule chasing after lots of black dots and chains in a simple maze. You destroy the virus by collecting all the dots, killing too many of the chains too quickly costs the corporation its turn block and die and raises the patient's temperature, when it reaches 100 degrees the patient dies.

The movement of the capsule is well done, but the other graphics used in the game are poor and make no use of the Amstrad's capabilities.

The virus speaks with a deep, guttural voice which is very hard to understand. In fact the only thing that kept me playing this game was the need to hear the spoken phrases several times to understand them.

A set of instructions might have helped, but at £19.95 this game will always be poor value for money.

ATARI

Dragonfire

In *Dragonfire*, Marcie the dragon has gone mad and got himself into trouble again. As his big long brother, Marco, it is your responsibility to try and rescue the old fool. Marco has the theme of *Dragonfire* from *Amstrad Computer Games*. *Dragonfire* is a program which looks just relatively new, but increasingly popular class of game, the arcade adventure.

Before the game begins you are given the option of controlling Marco via a joystick, the default keys, or selecting your own. You can choose it whether or not you wish to load a previously saved game. There is a comment button on adventure games but in this game I have recommended it as an action/adventure package.

The opening scene shows Marco riding cross-legged on a wheelchair chassis. By pressing the fire button a scroll appears at the bottom of the screen. The scroll displays the particular spells that are at your disposal. One of these gives you the power of teleportation, having selected this spell Marco's visual projection leaves his body and can be moved around the screen.

On the screen, Marco will encounter numerous malevolent characters. Some of these may possess Marco with new spells, should not be willing to trade specific spells for them, as all there are 18 such spells, and you're going to need them all at some time or other.

As a game *Dragonfire* is very playable, but a little unfair from that age-old problem of Similar Spectrum conversions. The graphics are clever but basic.

Summer Comes II

When it appeared, *Summer Games* took the software market by storm; there was no sports simulation to match it. Faster than simple, below a following, *Summer Games II* is even more impressive. The format of the two programs are similar, just not as simple, direct and more seductive.

Eight events are offered — triple jump, diving, javelin, discus, high jump, running, cycling and wrestling. Unlike other packages I've seen, most of the games do not require continuous input; breaking the flow of your playtime. Having said that, the control of some of the events takes some getting used to. Fortunately, a practice mode is available allowing you to get the hang of each event. Two joysticks can be used and up to eight players can take part.

Each event is portrayed in excellent cartoonish mode with very smooth scrolling as required. The swimming event is

particularly tasty with different scrolling of the background to give a feeling of depth and parallel. The standard of simulation is superb with full attention to detail. The use of sound is both effective and interesting. Each event has the sounds of running feet, cracking water or whistles when a required. Between events there are a wide range of themes including the national anthems of the countries.

As before, the games have both opening and closing ceremonies. The opening is basically unchanged but the closing ceremony is highly spectacular with very jolly visual effects. The strength of this game lies in its accuracy, additional variety and pure enjoyment to details. An excellent though is that if you possess just one of *Summer Games*, there is an option to combine the two so that you can compete in 16 events — nice one!

We advise a simple, budget the best, buy this package — you won't regret it.

Summer Games II

While I waited for the game to load, I read the instructions.

Move Marichy around, smashing the walls and scoring points until the music is over in your turn and then you must avoid four obstacles which will damage you. Alright? This cannot possibly be, just wait to see, just what I thought I would never see another rip off of *Populous*!

Well, actually, "No Marichy" is not a straight copy of the much closer *Populous*. The graphics have passed from the original game over. Also, the obstacles are rather more devised than their *Populous* counterparts. They have evolved to fit better in the game intervals. Obviously, you cannot go over them and therefore make it much more difficult to smash up all the palls in order to clear a room.

Luckily, Marichy himself is a little smarter than the *Populous* Progs man since he has learned to use a shovel. Unfortunately a shovel cannot be used unless once you pass over it you just drop through, the function increasing with each successive shovel. So make sure you power up in the original.

There is also a version of *Marichy* as the computer. These instructions on the play card explain that you will not be able to play the game had it written without the good graphics.

The games are good but not exceptional. However, reasonably good games for the price of a quarter of a game can't be beat!

BBC

PERIPHERAL

Jon Revlis reviews two comparable printers — Epson's P40 and Micro-Peripherals' CPP-40. Which will best suit your purpose?

A printer is normally the first peripheral addition that most users make to their system. We are fortunate today that there is such a large range of printers to choose from. However the large range of printers means a large range of papers, with the majority of printers falling within the £200 to £300 price bracket. This week however we will be taking a look at a pair of printers which cost at below £100. Does low price necessarily result in low quality, or does not

Rather suprisingly, the first offering is the "Value 1200" printer comes from the Spanish firm, The Spain P40 is a simple 21 x 13 x 4 cm cream box which would easily fit into a backpack or briefcase along with his/her portable computer. The size of portability is maximised by the inclusion of an in-built power supply. The Spain has its own rechargeable batteries which provide sufficient power for up to six hours printing, a mains adapter/power charger is also included.

The P40 is a thermal type of printer, these print out their characters in one continuous line without the use of the conventional inked ribbon and pen. Most printers I speak about print a dot on the last minute paper. One thing that you must bear in mind with this type of printer is that you must be able to find a socket for the paper. And you must also be prepared to pay for that much data due to its low resolution qualities. I suppose that a small plus

point is the fact that you will never have to purchase a printer ribbon. The paper is purchased as a continuous roll which fits neatly inside the machine. This should prevent it from making a hole for escape down the side of the Lexmark L1000 1200 which you see in the middle of printing the company's sales figures. The paper is a mere 11 cm wide but can still comfortably hold 40 characters when the text is printed in condensed mode.

Finally we get down to the quality, can this small cream box produce printed text of sufficient quality to bear the Spain name. In a word, the answer must be, yes. I was very impressed by the quality of the printout. The printer prints with a variety of the different control codes giving normal, double-width, condensed, and embossed printouts. Each line of text was aligned so accurately that it was still very legible.

The Spain P40 printer is compact, reliable, and produces a very high standard of printout. At a price tag of just under £100 the P40 is a bargain.

The second of the two budget printers that I took a look at was the Micro-Peripherals CPP-40 colour dotmatrix printer. This too is a portable printer which contains its own internal rechargeable batteries and comes complete with an AC power adapter. The CPP-40 is supplied in two colours. Black only, but the shouldn't worry too many more as most of

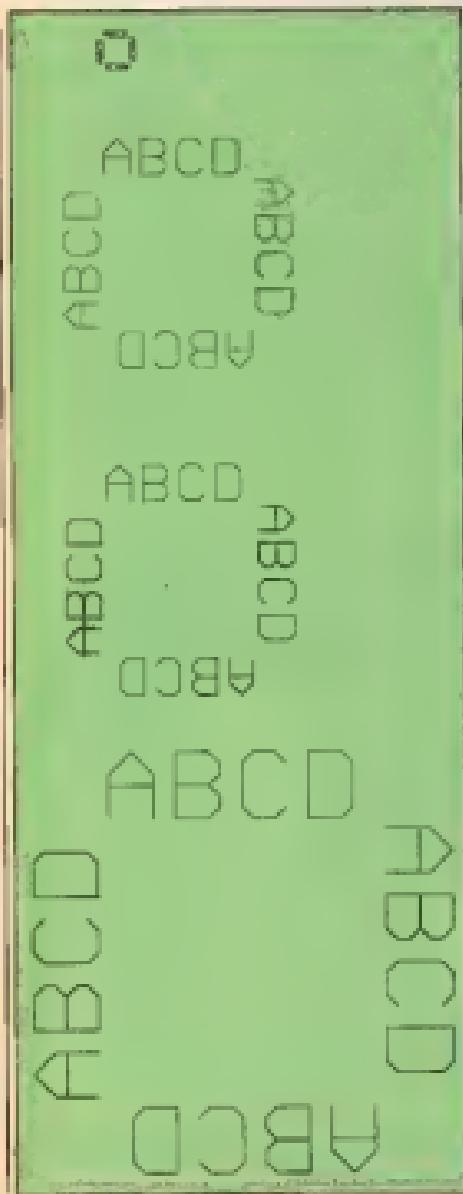

today's computers are fitted with a Centronics interface as standard.

The method of printing used by the CPP-40 is quite novel, it uses a series of four small pins, each of a different colour, which stamp a coating record. This record is used as the print head which moves from left to right over the paper. The paper is supplied as an 11 x 8 cm wide continuous roll which sits on top of the printer.

The printer will print text in either 8 or 10 columns across the paper. The user selects the required mode via a series of DIP switches which are located on the base of the machine. In both modes the letters are actually drawn on the paper using dot-matrix logic, which is dot matrix paper which has patterns of dots. Lower case p's and q's are drawn with two diamonds in either 8 or 10 columns mode. All of the characters are well defined though, even with several average strength may have difficulty in reading the 10 column printout.

The CPP-40 has two modes of operation, there are Text and Graphics, both of which are software selectable. The Text mode is the default mode and is the one which would be used for producing listings and when the printer is used in conjunction with a wordprocessor. When in this mode the carriage set goes carriage return is performed via the controls on the front of the printer before printing begins.

The graphics mode of operation is selected when the user wishes to make use of the graphic features of the CPP-40. If the user uses the graphics mode your computer's version of BASIC must possess the LPINTERP state-

**The printer** (Continued)

Multitech Micro Printer

by David M.

Editor

One of the best and most popular printers for the Amiga is the Multitech Micro. This is an expandable printer and can produce up to four pages per sheet. It has been well received with the public and is particularly popular for the BBC monitor.

The printer is supplied in two boxes or two colour units. It is built-in and is not required to open it up to get at the printer or a spooler unit. This can be removed to service the printer and service it. Each Spooler is expandable so that you can print four pages at a time and connect over the Amiga's serial port. You can also connect over the Amiga's parallel port. It may have all the advantages that you could want but it does not seem to have your facilities like you might expect in a "real" printer. We took a look at this printer and decided to take a look.

The printer can be used with or without software. You can use a plain printer or the printer can use one of two drivers. It is called "Printer" which has support across the machine and the Amiga monitor. The second software of the printer is called "Printer" as the printer can not tell the user what software is being used and the printer type cannot be set. That

Price £

£149.95 inc VAT

Weight 1.1

The last word we provide are related three drivers of the printer which

"Printer" uses the very standard of the Amiga. The "Printer" driver is the most popular and easiest to use.

A printer is normally the first hardware addition that most user make to their system. We are fortunate today that there is such a large range of printers to choose from. However this large range of printers comes in a large range of prices. The majority of printers fall within the £200 to £500 price bracket. This we is however we will be taking a look at a pair of printers which retail at £9 printer is normally the first hardware addition that most user make to their system. We are fortunate today that the printer is normally the first hard

A pruner is normally the third hardware addition that most user have to their system, in my experience today that there is such a large range of pruners to choose from. However this large range of pruners a pruner is normally the fourth hardware addition that user have to their system or are interested today that there is such a large range of pruners to choose from. Longer than large range of pruners comes a large range of prices. No majority of pruners fall within the £20 to £50 price bracket. You can however go up to £100 or even

ment or some equivalent, PAINT # 8 works on the Amstrad CPC664. The standard instruction book illustrates how the program can be used to draw geometric shapes, print text at any size in any of four positions and change the pen colour at

SHEKHANA COMPUTER SERVICES

I am enclosing a copy of our latest software brochure on the new version of the system. Please let me know if you would like to receive a copy.

The unit is very compact (21 x 21 x 4 cm) and is powered by built-in rechargeable batteries which provide sufficient power for 4 hours printing. The 128x128 pixel resolution for the LCD is ideal choice for the handwriting to be in accordance with the portable computer. The major limitation with this type of printer is the fact that the paper used is only this size, and probably expensive. They require my reader the thermal printer produced by Zebra Corp. for use with his computer. Fortunately the P-400 does not produce the same "smudgy sort" of quality printout. The little blue inkjet produces the quality of printout that users have come to expect from such a machine. The printed printout is of 10 characters wide, but when used in a personal form mode it can quite happily fit 10 readable characters onto a single line, so what's really the difference?

Specimen: The health care setting that I have ever encountered, but for quality and performance it is probably a cancer.

The third offering is the "conventional" category in the DP-48 three hour Repertoire, it is a soft, colored perlite granular mix. In mix with the Open 140F, the DP-48 has a healthy relationship together and grows completely with a strong skeleton.

The 3D-plot uses 128 x 128 pixels and prints using a series of four sets of different-coloured inks; these are total in a rotatable series. A set of 3D plots can then be printed on the bottom of the enclosure to be used to switch between 3D and 2D printing modes. The quality of the product is very impressive, even in 16 columns mode the characters are well defined. Though small with 16x16 average print size, may have difficulty reading the text.

GUESSING GAME

PIT your powers of guesswork against your C64 in this game by Michael Diskoff

Try developing your powers of PIP at this card setting game where the computer holds all the cards. The game is a version of the TV show "Play Your Cards Right," minus commentaries, Monty, Marlo, and studio audience shouting "higher" or "lower." You will have to invent the rest of the family-in-to-cards crowd effects.

The idea of the game is to successfully predict whether the next card will be higher or lower than the previous one. If you are correct, then a spot will be awarded and you will again be required to predict the next card. This will be repeated until the cards on the screen have all been turned over then the last card is taken and placed at the start of the next five cards, which will have been dealt from the re-shuffled pack.

If you fail to predict the next card, the computer will respond with a cry of alarm and display the "GAME OVER" message.

How it works:

```

#1-20 Most obvious, self-explanatory
#21-22 Set up character and character map key
#23-24 Set up predicted background
#25-26 Set up score position
#27-28 Set up variables
#29-30 Set up bank of five cards
#31-32 Set up score loop
#33-34 Each value for max, min, and
#35-36 Each of player predicted
#37-38 Set up next card
#39-40 Update score and print it
#41-42 Set up player predictions
#43-44 End of main loop
#45-46 Play game
#47-48 Set up a variable made
#49-50 High score table
#51-52 Set up card value
#53-54 Set up right card
#55-56 Set up character table
#57-58 Set up data for characters
#59-60 Set up data for game

```

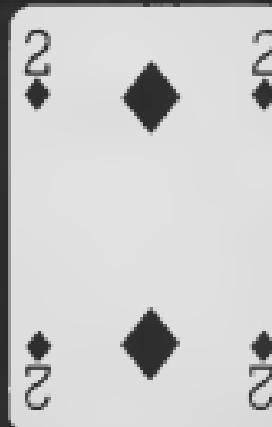

on the screen. If you have managed to get out of the highest scores, you will be allowed the privilege of typing in your name, to be recorded in the high score table.

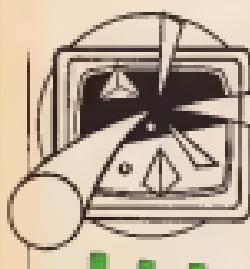

The keys used are the function keys marked F1 and F7. F1 is used to predict higher, and F7 to predict lower. Included in the program is a routine to clear any errors in the data. The error messages are self-explanatory and clearly say something such as "DATA ERROR FOR CHARACTERS". As the program contains some machine code, you should save the program before running it for the first time.

Variables

#1	start address of score-character
#2	start address of right card
#3	top 5 scores and names
#4	previous top 5 scores and names
#5	string of characters for high of card
#6	string of characters for low of card
#7	random card number for all five cards
#8	set to 1 if card is an ace
#9	character prediction
#10	pointer for character (first or second)
#11	value value for card
#12	number of card being played in score current score
#13	value just set string location
#14	set to 1 if you guess correctly
#15	set to 1 if see name higher

IT'S A GAME

How to make your graphics move is the subject of this week's discussion in our Amstrad programming series by David Ellis

There are various ways in which movement can be simulated on the VDU. The easiest way is to use different graphic characters at the same location on the screen and switch between them — in the same way that a cursor moves in a text editor.

The long STATIC DISPLAY command does this in its simplest form. Three pairs of graphic characters are used and these are printed alternately at the same location. The effect is one of movement. Naturally, you could use larger areas of the screen to display larger characters. These may be built up from several user-defined graphic (ADGET) characters to produce a reasonable display of movement.

The long USB MOVE-MENT shows a simple example. This is soft static movement though. Although the character is moving it stays at the same location on the screen.

To move an object around the screen you first have to paint it, then delete it, and then paint it at the next position on the screen. The long ARROW MOVEMENT shows this technique using four graphic characters relating to the four corner key arrow symbols.

When the program runs, the arrows will appear to move around the screen — albeit somewhat jerkily. This program shows the use of the WHILE/WEND construct. Note how the testing takes place. I could have used FOR/NEXT loops instead but opted for WHILE/WEND as it is more fashionable these days!

The program CURSOR MOVEMENT moves an arrow around the screen in a similar manner, but this time the movement is controlled by you. When you RUN the program, press any of the four cursor keys and the arrow will be positioned for that key. The arrow will move if you hold the key down. Hold down two adjacent keys and the movement will be at 45 degrees plus very exciting 8 steps, but this relates to the key as the most fundamental part of any game.

Most games require now or never some action around the screen. With Knight Live it is the "adventure" that you move. With Sorcery it is the Sorceress that you control. With Pebbles from it is the memory that changes in response to the player's key inputs. Naturally, these are all programmed in machine code — for the personal computer the user.

The problem with USB's is that they tend to produce rather jerky movement. At each time the character is moved it has to jump by one whole screen position position. In Mode 2 this is a jump of 8 pixels. In Mode 3 it is a jump of 16 pixels, and in Mode 0 a whopping 12 pixels. No wonder it's jerky!

One way to overcome this is to use TAB. This will "tag" the normal print cursor onto the graphic cursor. Movements can now be made in steps of one pixel, producing smoother but slower movement.

The long STAR COLLISIONS is a "trial" game that uses this technique. However, in the

case it is not a USB that you painted but a joint is BROKEN instead. The object of the game is to repair it.

The adventure is less. It goes into random places in three different colours. Your quest is to visit as many of the towns as possible but you must avoid running into poor cows that left in the sky, and you must also avoid colliding with any RED stars. By the way, if you are using a green screen monitor you will have trouble seeing the RED stars and also your cows will, on change mode, turn into a jagged colour. Try WHITE (128) and you should then be able to differentiate between the three varieties. You get 10 points for visiting a BRIGHT CROWN and 50 points for the finishing YELLOW-VELUE star.

Your speed is fixed — pressing any of the four cursor keys changes your direction accordingly. You can go off the limits of the screen if you walk, but there is little point outside the panel. You score is printed in the top left hand corner of the screen — avoid this also — in fact, if it's RED, avoid a like the plague!

The three levels that do the main work are at 2080, 1920 and 1600. These are the graphics TABS we can set when PLOT the panel in, at the next location — so the locations that you will be moving to. If this is PLOT 2 (line 1920) then you score 10 points and get a 10-pixel step. If it is PLOT 3 (line 2080) then you score 20 points and get a step. If it is PLOT 1 however, then you crash and produce an explosion several plot 1080.

And don't forget to complain to the fledgling Amstrad user if the machine of Knight Live, Alex B, Sorcery etc. What do

you expect for a mere 21 lines of BASIC? The program is brief and without frills — make more, but it does form the basis of a sensible game which could be extended and modified to make

it much more interesting and useful. I shall be returning to this game in a later article, after looking at interrupt and sound, to see how these could be used in games on the personal

THE COLLECTOR.

RON COMPLEX

Ron Complex gets his fingers burnt by a hot tip in this week's instalment of the serial with the built-in time warp

Ron Complex bolted into the first edition of his emergency supply. He'd been studying in a doorway opposite the Amalgamated Constitutional Building for three hours. It was late and the road below stampede crag packed down the deserted street like cellulose rammed wood.

Ron's supply was low. Jim Kavan had had his caught on the right, and the offices of Amalgamated Constitutional were the first target in the Random Code word Generator book my department.

Kate thought about going home. "I've still got 20 years worth of old newspapers, so catch up on it. Week 2 converted that subscription before the big

freeze". Ron was busy passing his finger crookedly over the television screen when he heard a car approaching.

The car stopped outside the AC building and a second later exploded off into the night. Left on the pavement was a tall thin figure dressed entirely in black giving two for a pair of green drapery socks. The figure bent down and took a black leatherette from a small bag and pulled it over his head.

After a few moments he took off the tan bag and sat on the bushes. "Something tells me you pay it from the inside job," thought Ron.

The black figure took four other pads from the bag, put two on his chest and attached

the others to the palms of his hands.

"It looks like human fly control," answered Ron. Within a few moments the drapery socks were all that could be seen as the figure crawled up the outside of the building. Ron moved across the street. He put on his hands and rubbed them together. "Why couldn't he act like everyone else?" thought Ron.

As Ron began to scale the doorway a black car pulled up on the paved drive. On the roof of the building Ron saw an open skylight and jumped down into a darkened corridor. He heard the sound of his off-hand checking and headed for it.

Back in the Mortification Building, Marcus was bent over his colleague terminal frantically ringing his fingers. He'd been trying for five minutes to maneuver his remote controlled surveillance pad through the skylight of the roof of the AC building.

The images on the television pad were picking up approach of someone on the roof. "They're going to get us, of course," said Marcus. He lowered the plastic to the right. The monitor showed a climber rapidly climbing the screen.

Marcus pulled back on the joystick but it was too late and the screen went blank. Marcus wratched the joystick out of its socket and pulled up the pliers. "Observe, Frank, no another god and make a present."

Ron could hear the mad giggling around him as he walked down the corridor. He pushed open an office door about six inches and saw the silhouette of the human fly crouched over a glowing terminal screen. Ron crept across the room and stood behind the transposing character. "I always copy this lot," thought Ron as he put his hand on the man's shoulder. The checking stopped.

"Crap lot. You pulling the plug on your?" said Ron. Ron felt a hand come down on his own shoulder. "Inspector Pythagoras — Legal Board," said a voice. "You're such underlings. Don't take anything personal, it would be held in evidence against you."

Next week: The Return of Summer

LASER REVENGE

Not only do you have to be a D-I-Y enthusiast to succeed in this game but you've also got to be pretty friendly with a laser gun.

You are trapped in a room with a couple of meisters. The only way to escape is to paint at least 100% of the floor and floor the meisters out of your way. You'll then find yourself in progressively more difficult rooms — winning coverage is yours!

Notes

This program is in two parts to save memory. Part 1 defines graphics and ENVELOPES is used and structures. Part 2 is in the same code to be SAVED as "REVENGE" onto CHAINLOAD from program 1.

The program was written on a disc based machine and automatically downloaded. If, however, you do not have a download make the following alterations —

Program 1

DELETE 400

After 400 = 42040UNL10,31,
7,1,129,132,133,PRINT,
SPECIALEXC156,VOLUME,
PAUSE

Program 2

DELETE 10 Working: Do Not
Rewards

Some machine code is used in Program 2, make sure you press a before running because if you make a mistake it's quite possible that you will lose the whole program.

The following routine in program 2 could be adapted for other disc programs or could the machine code in program 2 which generates the SCREEN command.

Variables

- R1 as last part of disc
- A10 scroll loop
- W1 contains message to be printed
- T1 read message
- 2% delay loop
- 51%,10% position of enlarged character
- CH1 CHRS number of character to be enlarged
- 50%,100% colour of enlarged character
- D1 score for enlarged character to be noted
- H1% depth score
- H2% high score names
- A1% used in loops
- B1% three nipples
- F1,L1% amount of laser filled

PROBLEMS (See Fig. 7-1)
45. If $\overline{PQ} \parallel \overline{RS}$, $\angle PQR = 120^\circ$, $\angle QPR = 40^\circ$, and $\angle RSP = 30^\circ$, find $\angle SQR$.
46. In Fig. 7-1, if $\angle A = 100^\circ$, $\angle B = 120^\circ$, and $\angle C = 80^\circ$, find $\angle D$.
47. If $\overline{PQ} \parallel \overline{RS}$, $\angle PQR = 120^\circ$, $\angle QPR = 40^\circ$, and $\angle RSP = 30^\circ$, find $\angle SQR$.

• **БИОЛОГИЧЕСКИЙ**
 Активность антибиотиков определяется в биологических системах с помощью тестов на чувствительность к различным антибактериальным препаратам. Для этого используются различные культуры бактерий, включая *Escherichia coli*, *Staphylococcus aureus*, *Corynebacterium diphtheriae* и др. Культуры выращиваются на питательных средах, обработанных антибиотиками различной концентрации. Чувствительность определяется как минимальная концентрация препарата, при которой бактерии не растут. Результаты измеряются в микрограммах антибиотика на единицу массы питательной среды.

SKETCH IT

In this short routine Maurice Govin explores the differences between the Spectrum and Spectrum+ when you are using cursor control

SPEC+ SPECTRUM+ STRETCHED

VIA IN COMMAND & CURSOR KEYS
BY MAURICE GOVIN 1988

```
10 LET X=120: LET Y=50
100000 X,Y=120,50 Position
20 LET A=IN 823422
30 LET B=IN 824500
40 LET X=X-16-2342+(A-281)
50 LET Y=Y-16-2342+(B-247)
60 PLOT X,Y
70 GO TO 20
```

SPEC+ SPECTRUM STRETCHED VIA

INKEY\$ COMMAND & B,C,D,E,BEVS
(cursor keys original Spectrum)
BY MAURICE GOVIN 1988

```
10 LET X=120: LET Y=50
100000 X,Y=120,50 Position
20 LET X=IN-(INKEY$-"C")+(INKEY$-"D")
30 LET Y=IN-(INKEY$-"B")+(INKEY$-"E")
40 PLOT X,Y
50 GO TO 20
```

PRECEDE IN COMMAND FOR YES/NO?

```
100 INPUT ""
110 POINT B$,"YES" T Y/A/B"
120 POUSE B LET A=IN 823422
130 IF A=1200 THEN PULSE "B"
140 IF B=1200 THEN PULSE "B"
150 GO TO 100
```

The newer or standard keys on the Spectrum+ are now conveniently placed at the bottom of the keyboard either side of the "space bar".

Unfortunately in their new location these keys no longer respond to the INKEY\$ command. Any program written for the original Spectrum and using

keys 1, 2, 3 and 4 at the top of the keyboard via INKEY\$ will be incomplete using the new cursor keys. Luckily, however, the IN command remains compatible with both methods and both sets of keys.

Page 140 of the Spectrum manual explains the use of the IN command to check if a key has been pressed. Unfortunately the Spectrum+ User Guide on page 60 incorrectly states the key values for the keyboard addresses in 1611 although the addresses themselves appear to be correct.

The correct addresses and key values for the newer keys are as follows —

Cursor left or key "L"
IN 81401,219

Cursor right or key "R"
IN 81401,221

Cursor up or key "U"
IN 81401,217

Cursor down or key "D"
IN 81401,228

Cursor "left" and key 2 are read from the top left-hand half of the keyboard to address 81401. The remaining cursor keys L, R and U are read from the top right-hand half of the keyboard to a single address, i.e. 81401, with an appropriate key value.

The sketched moments included here are used to demonstrate the IN and INKEY\$ commands to read if a key has been pressed. Because since IN (key 21) has a different address from the other cursor keys it is possible to produce diagonal lines to the left by simultaneously holding cursor "left" and cursor "up" or "down" together.

Diagonal lines to the right are not possible, using this routine, because these cursor keys share the same address, i.e. 81401. The second routine uses the INKEY\$ command which will only recognise if a single key has been pressed.

The IN command does not distinguish between upper and lower case letters and the final routine shows how the IN command can be used to identify key "Y" (as "Y") at address 1611, 82342,116. Any other key produces the response "No".

MUSIC 500

Shingo Sugihara sings the praises of the Music 500 system for the BBC

The Beb is a dialect of BASIC with very powerful commands to control the sound. Not only does it allow you to play short pieces of music without too much difficulty, it allows you to control the waveform of a sound and repetition of parts. Not surprisingly, many people get enormous satisfaction from recording music for the Beb.

However, there comes a time when you realize that the Beb's built-in sound chip with its thirty voices is just not enough to play any decent piece of BASIC is just a pain in the neck for composing tunes. So I was quite surprised that it has taken so long for Acorn to produce a

systematic specially for the Beb but I think it's been worth the wait.

Music 500 is now ready to look at. It comes in a metal box, about the size of a half-height disc drive and is connected to the Beb via a ribbon cable to the DIL16 pins. As with all peripherals, the ribbon cable is much too short and I had to reposition everything before I could use the Beb, set the monitor and access the disc drives and the printer at the same time.

Then I came across another snag. The cable to connect the system to an external amplifier (the Beb's internal speaker cannot be used) is not included.

so I quickly rushed to my local Halfords and bought an appropriate cable.

Before you can use the Music 500 system, you must load an AMPLI (which is an acronym for "enhanced music programming language"). This is a big program so I was pleased to see that Acorn have supplied a program to transfer all the necessary files from tape to disk. They have also included various demonstration programs for you to have a look at. These are very well done and show the incredible powers of the Music 500 system. However, before you can start making pieces like these yourself, you must learn a totally new language — AMPLI.

Some of you may think that supplying a brand new language is going slightly over the top but it is in fact the most sensible

thing to do. In many things that happen simultaneously. A conductor does not rapidly go through every single player for every single note; it is for this reason that AMPLIE is multi-tasking.

Some of you might be surprised to hear that it uses reverse-Polish notation as its basis, so the famous command "ADD 2" would be entered as "2 ADD" in AMPLIE. This may seem a little odd for most musicians at first but you will quickly get accustomed to the idea. In fact, AMPLIE is a very powerful music composition language indeed.

On booting the disc for loading it from tape, AMPLIE greets you with the message—AMPLIE ready (SEE Version 1.0).

(C) 1984 Hybrid Technology Ltd.

The "%>" is the prompt for you to enter commands, just like "%>" in BASIC. Now, you can play simple pieces of music directly by using quite readable

notation and store them away as "words".

A word is a pre-defined set of instructions or a few random creation-like procedures to BASIC and should be familiar to BASIC users. Words are available to control basic things like the duration and pitch of a note, tempo, rests, key signature as well as creating the waveforms of the sounds themselves.

As you create probability shapes, creating a waveform is quite simple (three more complicated than the ENVELOPE command). The features available will not mean much if you have never used synthesizers before but they include ring modulations, frequency modulation (used by the very inventors of Yamaha DX remakes), white noise (not percussive effects), synchronization and (assuming you have up enough).

Waveforms may be created by harmonic synthesis and granular synthesis. Creating waveforms is probably the most

difficult part of AMPLIE. The manual is rather difficult to understand (oh, I'll be honest, it's virtually incomprehensible) and it took me a long time to get even a vague understanding of what was going on.

Luckily, it passes waveforms comes with the package so you can start creating music without having to worry about the sounds themselves yet let me assure you that most looping effects are possible if these features are exploited.

AMPLIE is indeed a very powerful language but unfortunately, the manual leaves a lot to be desired. Not only has the manual no index and printed by a dot-matrix printer, it is full of technical jargon (logarithmic and all) very badly out.

In fact, unless you are a professional programmer and a musician, I would have thought the manual to be totally incomprehensible. However, Music 300 is a very pleasant piece of hardware accompanied by a very powerful and innovative language and the quality of musicals should not put you off.

Many people are pleased with the 300 system. There is already a sequel by AMPLIE and hybrid themselves are

planning to release a keyboard and a BBC interface soon. I would personally like to see AMPLIE implemented on ROM. This would make things a lot easier for tape users and would obviously allow much bigger pieces to be written. Also, a cheap but good quality amplifier would not come until after all, not everyone has a HiFi system and a teacher book.

A version of Island Logic's music system for the BBC should be useful for those who cannot afford Music 300 those who prefer the traditional hybrid like synthesis or the related creation of AMPLIE. On top of that is, a set of definitions to mimic popular instruments, a compilation of popular tunes, pages and a better manual would all be a welcome addition.

At the moment, there is nothing to touch the Music 300 system in terms of power, flexibility, quality of synthesis or value for money. If you are thinking of buying a synthesizer, I would strongly urge you to consider (and buy) the 300 in action. After all, it costs 99.95, it's a lot less than most decent dedicated synthesizers. **SA**

Technical specification

Channels	
Number	16
Frequency range	0 - 20KHz
Frequency resolution	0.00001Hz
Pitch range	-2 to +10 octaves
Pitch resolution	1/700 semitones

Replace or repair?

All too often computer users receive no charge within twelve months of purchase and their warranty has ended they will be out of pocket again, and thus they have no more than a month for the return of their machine. Builders may like to know that if a fault occurs in their machine within twelve months of purchase they are legally entitled to a new machine as a replacement. It is the same with most consumer goods.

The manufacturers will often agree to do this if you do

not repair but it is actually against your best interests. Once you submit to having a repaired it means that during the remaining period of the twelve months it can only be repaired again — you can't replace it.

Also it is not advisable to fill in the guarantee card as the manufacturer's at present in the position "Your statutory rights are not affected" meaning that that place of card is useless.

A full receipt is the only item needed as it is the shop with whom you have the twelve month guarantee. This letter was sent to us in

direct result of a recent check I had with Domes over a radio cassette. I was offered a replacement and a refund and the cassette would not back down until I submitted it for repair.

I have since learned that I was entitled to a replacement and so are you if you are on the same position. If they refuse, get the manager, and if he refuses call the head office or get advice.

Don't let any mistake be one of your own. It is your right, you know!

Andy Clarke, Atherton

In praise of older software

It's not easy to categorise what you are producing such as software packages, however it does have a few pre-requisites.

Firstly, would it be possible for people like you to show the software writers with regard to some of the programs. Surely the type of program can be checked by the writer.

Also could you please publish some reviews on

topics such as different popular languages of Pascal. Pascal is much of the software I consider about the "intermediate" level, and others of that type? Would it be possible to include a "tutorial section page?"

Finally for my suggestion, complete the software reviews. I am another Pascal fanatic, well, at least I write them for publication and to a mark. Please consider the idea and

early closure packages that could be used to software reviews. Applied to them, the reviews might be closer to those of the latest shareware such as Domes, Texas and QBasic? I realize that there are software reviews referred to each magazine and usually it is better this, however I would like another Micro-User right off??

LETTERS PAGE**IT'S A RACE**

Get those skates on if you want to enter our Mikro-Gem competition and there are big prizes on offer!

I'd spend that pounds on the very special prizeoffer from Mikro-Gem.

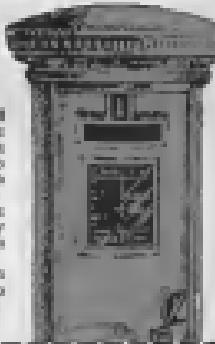

They have a new game due out in the autumn based on the Battle of The Planets television programme and as a treat for Micro-Computing Weekly readers they are offering 200 copies of it in preview game format.

All that you have to do to take advantage of this special offer is send the coupon below to Mikro-Gem and the first 200 who respond will get a copy of the game to review.

With the game will come instructions on how to enter the Battle of the Planets competition in which the highest scorers will have the prize of a trip to London and the chance of a £100 cheque and £15 worth of games. There is also to be one ICM reader in the final and they will win £10 worth of games in addition to a Mikro-Gem Trophy.

So get yourselves moving all you Spectrum owners, you have to be one of the first 200 to get the tape and then you have to play the game as normal, as usual to increase your score. The high scorers soon must be back with Mikro-Gem by Friday 12th September if you want a crack at the prize.

Don't wait, get the coupon today, you have a great deal to gain and only 17 days to lose.

**Mikro-Gem's Battle of The Planets****Baby Coupon**

I am a Spectrum owner and would like to have a go at the special Battle of The Planets game tape. If I send in the first 200 please send me a copy. I understand that 200 tapes have already been despatched. I will not be able to enter in excess of a tape.

NEW COMMODORE 64 CASSETTES OUT NOW FROM ARIOLASOFT ►►

KARATEKA

Kumiko is one of many in the Way of Kintsugi, the centuries old secret art of Japan. In this classic story of just more than 100 pages, an irreversable wife goes through a life in a desolate prison; from a campfire they made the peace of the eastern Asuras.

Brotherhood have created an exciting action game as close to an interactive movie as computer games players are likely to get. Storytelling and atmospheric sound effects, along with superbly detailed action sequences, give you the full control of this hero at every movement, including running, shooting and all fighting movements, including the strategic timing and placement of both Brooks' pins and punches in a unique and fast-paced adventure.

The story progresses through a series of increasingly more challenging encounters with the enemy, until you finally meet the ultimate opponent. Multi-level objectives make trying to beaten the game one hell of a challenge.

**US No 1
HIT**

- Suspenseful, movie-like story
- Run, Punch & Kick ability
- Scrolling animated characters
- 3D scrolling backgrounds
- Multiple levels, levels in the game

ESTEALTH

STEALTH has everything the arcade video player dreams of. You're right at the heart of the action when you play it. Powerful Stealth Strikeforce on a mission of utmost importance—to destroy the Dark Tower and with it the Neo-Subs Council of Nine. The city is alive with war-fighters, closing in from all directions. The landscape stretches with submerged river towns. Bring out your fighting properties of 100% Power-controlled photon tanks, high-energy laser artillery... all of this and more await players of **STEALTH**.

- **Snaking 3D effects**
 - **Deadly Energy Attack Phases**
 - **2 Levels of SEAL**
 - **Violent River-Snaking Missiles**
 - **Snaking Demolish**
 - Active Vehicles
 - **Positive-Negative Energy Fields**

AND CULTURE

THE CASTLES OF DOCTOR CREEP

Twelve cases containing over 200 rooms await inspection. You will test each room filled with challenging puzzles and hidden surprises. Here traps, fluorescent generators, death rays and reanimating machines are only a few of the妙な situations that CASTLES OF THE DOCTOR will bring you. It's a very challenging escape strategy game full of surprises and a little weird sense of humor. There's no turning back on a level of the good Doctor's home. You will want to keep coming back for more in the Cossack territory.

- ▶ 2 Player Interactive action
 - ▶ 13 Separate Missions
 - ▶ Over 250 Rooms
 - ▶ Mystery and Fantasy

Darby over Mr Del

Liz Collier from Stevenage sent us her Atom representing her and her son's creation of US Gold's Mr Del.

This game first made an appearance in the October issue just now and was a gold for Atom. US Gold have released it on the Amstrad and it's every bit as good.

The cassette takes some time to load, but when completed you are presented with a clear title page with options for one or two players using either or both of their joysticks in a left/right handed fashion — something new.

The aim of the game is to collect diamonds using your diamond. You can defend yourself with a pistol, killing the various ordinary baddies, diamond and bandit assassins. In order to progress onto the Del boy must kill all four assassins who carry a laser to spell out the word "Killer" as shown at the top of the screen.

There are ten more screens and each is filled out with "use" messages. The assassins are bad and you play the sorry victim killing them with the most powerful of lasers or losing one of the many lives you have after the screen full of them.

After every three screens a certain reward time taken and score is given automatically. The best is yet to come when you are given an extra life in the form of a travelling minicar.

Sound is complete throughout, playing a different tune for each place, which can be turned off. Delboy's a bit slow (why) in my view.

This has to be one of US Gold's best yet and if you don't have it — get it. It's a joy to play and picture perfect, from the well defined characters to the eye catching colours and the pleasant music.

Price: £9.95 or £14.95 (Disk)

SOLUTION to last week's puzzle

It's not difficult to work out that there are 3 ways to go up to 8: 8 to 16, 100 and 18 to 256 (256, 248, ..., 16). The answers to 1, 2, 3, ..., 15, 16, 17, ..., 255 adding 3 then 1 and so on give 1, 2, 3, 21, 26, 45. (You may know these as triangular numbers.)

Spots Up

Harvest time at Farmer Mike's potato field has produced a seriously mathematical crop. Shows the position of each plant where a plant has started. Can you complete the picture by marking in the X's where plants should be growing in the bottom row?
